

Final Project: Week 1 Manual Test Plan

1. Browse to <http://marvin-assistant.herokuapp.com/>
2. Check that it looks like this

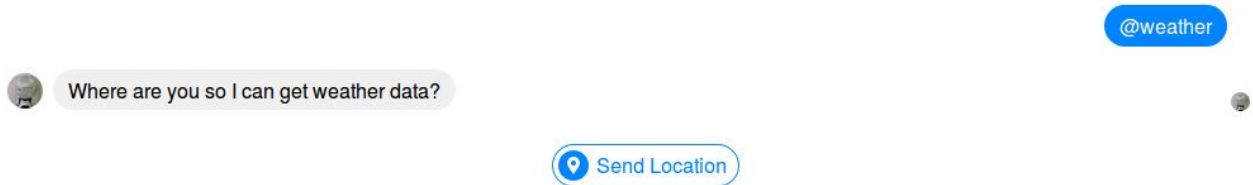

3. Follow the instruction to message marvin. (This will only work if you are a test user)
4. Message Marvin from his page

5. Send him a number of messages:
 - a. Send "asdf" - response should be 'You sent the message: "asdf". I do not know how to respond. Try sending "@help".'

- b. Send "@help" - response should be "I am a personal assistant chatbot. Learn how I can help you at: <http://marvin-assistant.herokuapp.com/>"
- c. Send "@hi" - response should be "Hi. I hope you are having a good day!"
- d. Send "@weather" - response should be "Where are you so I can get weather data?". It should also display a "send location message" that looks like:

- e. Press the send location button and send your location. The response should be a message with the current temperature at the sent location. Example response: "The current temperature is 43 F (6 C)"
- f. Try sending a number of greetings such as "hello", "hi", or "yo". The response should be "Hello! My name is Marvin and I am good." This means the NLP recognized the message as a greeting. If it is not recognized, the response will be the similar to part a.
